Abstract (en)

[origin: WO2017163114A1] The invention relates to a home appliance device, in particular a hob device, comprising a control unit (10), which is provided to actuate at least one switch (12) and to supply at least one driving signal (14) for completely transferring the switch (12) in at least one first switching process from at least one first switch position to at least one second switch position. In order to improve a switching behaviour, it is proposed that the control unit (10) is provided to modify in at least one operational state the driving signal (14) for completely transferring the switch (12) from the first switch position to the second switch position.
