Abstract (en)

The present invention relates to a falling and death leap defense rotating cylinder system (100), including a supporter (110); a rotator (120) that is rotatably installed in the supporter, and that inhibits a death leap of a death leap attempter by rotating when grasped by the death leap attempter; and a thorn unit (160) that forms a cutting edge, and that is detachably installed in any one or more of the supporter and the rotator. Accordingly, a falling and death leap of a death leap attempter may be inhibited more effectively.
