Abstract (en)

[origin: EP3434967A1] Vehicle lighting device (1) including a main lighting module (7), secondary lighting modules (8) carried rotatable in relation to the main lighting module, each around a first axis (A,B,C), which are arranged parallel to each other, and around at least a second axis (D) arranged perpendicular to the first axes, and a control unit (13); the main lighting module being designed to generate a first light beam (DB) configured for a dipped beam function and a second light beam (HB) configured for a high beam function, forming on a test screen a first and second light projections (LP1,LP2); the secondary lighting modules (8) being designed to generate each a third light beam (LB) forming on the test screen a third light projections (T1-T3); the control unit (13) being configured to rotate the secondary lighting modules (8) to overlap all the third light projections (T1-T3) onto one another and onto the second light projection (LP2), substantially at the center thereof.
