Abstract (en)  
[origin: EP3435020A1] A heat exchange device (1) comprising at least one heat exchanger (2) comprising a plurality of tubes (4) configured for the circulation of a fluid, the tubes (4) being spaced from one another in order to delimit a passage (29) for an air flow, the heat exchanger (2) being delimited by an inlet face (5) through which the air flow is able to enter the heat exchanger (2), the heat exchange device (1) comprising at least one protective grid (3) arranged along the inlet face (5), characterized in that the heat exchange device (1) comprises at least one adhesive bond (17) between the protective grid (3) and the heat exchanger (2).
