Abstract (en)

[origin: WO2017167912A1] A pouch (10), in particular for loose tobacco, and a method for making same are disclosed. The pouch is in its closed position and comprises a pouch front wall (22) and a pouch rear wall (24), wherein an access opening is provided between the upper edges of the pouch front wall and the pouch rear wall, the pouch further comprising a cover flap (12). The cover flap depends from the pouch rear wall. An extension flap (14) depends from the cover flap. In the closed position of the pouch, the cover flap is folded over the front wall in order to overlie the access opening. In the closed position of the pouch, the extension flap is folded between the pouch front wall and the cover flap. In the closed position of the pouch, the inner surface of the extension flap adheres peelably to the inner surface of the cover flap.
