Abstract (en)
[origin: WO2017200448A1] The invention relates to a body support (12) for users with a handheld media in which a person (26) and user of the body support (12) maintains a proper posture of the body to avoid damage that may arise due to strain on the lumbar (10) of the body and spine 36. Herein, it is intended to support the front part of a user's body by resting the body's front on the body support (12) on a formed curvature (14). The body support (12) curvature has a curve shape that allows the user's lumbar to arch (30) in its well-intended neutral position in a user with a correct posture.
