Abstract (en)

[origin: WO2017167444A1] The invention relates to a medical manipulator 1 having a manipulator arm 10, an end effector 20 which is secured to the manipulator arm 10 and which has at least one tool 21, 22, 23 with a changing mass and/or mass distribution 46, and a manipulator controller 30 for controlling the medical manipulator 1. In each control step, the manipulator controller 30 uses a current load data matrix 40 comprising the changing mass and/or mass distribution 46 of the tool 21, 22, 23 in order to prevent deviations from a target position or target path of the tool 21, 22, 23. The invention further relates to a corresponding method for controlling a medical manipulator.
