Abstract (en)

[origin: WO2017167986A1] The invention relates to a system for the automatic production of a pharmaceutical preparation, comprising horizontally and vertically movable means for transferring a medicament from a first source container which is closed by means of a septum into a second target container. The moveable device for transferring the medicament comprises a cannula having a first channel for removing the medicament and a second channel for ventilating the first container.
