Abstract (en)

[origin: WO2017167423A1] The invention relates to an apparatus for packaging piece goods batches (10), having a transport device (3), which transports a plurality of piece goods (1) in a predefined transport direction (14) at the forward feed speed (vs), having a first wrapping device (2), which is suitable and intended to wrap a film element (12) around the piece goods, wherein said first wrapping device (2) has a dispensing unit (30) running around the piece goods, which runs around the piece goods (1) at a peripheral speed (vu) and which is arranged at an angle (α) relative to the transport direction (T), wherein the piece goods (1) can be fed to the first wrapping device (2) in order to be wrapped with the film element (12), wherein the angle (α) can be chosen as a function of the forward feed speed (vs) of the piece goods (1) and/or the peripheral speed (vu) of the dispensing unit (30).
