Abstract (en)

[origin: WO2017167421A1] The invention relates to a system (1) comprising multiple different working modules, each designed for handling drinks containers. The system comprises at least one first working module (3) and at least one second working module (5), wherein the at least one first working module (3) and the at least one second working module (5) each have at least one conveying device for transporting drinks containers, and different working functions for acting on the drinks containers. The system (1) also comprises an installation position (30), in which the at least one first working module (3) or the at least one second working module (5) can be selectively introduced for each operation. The system (1) further comprises an installation device (14), wherein the installation device (14) can be controlled and/or can be actuated for selectively introducing the at least one first working module (3) or the at least one second working module (5) in the installation position (30).
