Abstract (en)

[origin: WO2017167561A1] The invention relates to a method for operating an internal combustion engine (1) through specification of an injection profile which is defined by adapted injection parameters ($u^* e,k$), having the following steps: – determining steady-state injection parameters ($u e,k$) on the basis of a predefined steady-state injection profile characteristic map; – determining corrective injection parameters ($\Delta u e,k$) on the basis of a predefined corrective injection parameter model, which provides corrective injection parameters ($\Delta u e,k$) as a function of one or more state variables of an air supply system (3) and/or exhaust-gas discharge system (4) of the internal combustion engine (1); – applying the corrective injection parameters ($\Delta u e,k$) to the steady-state injection parameters ($u e,k$) in order to obtain the adapted injection parameters ($u^* e,k$).
