Abstract (en)

[origin: WO2017173429A1] Presented is a multi parameter automated luminaire comprised of a plurality of light engine modules a plurality of which by design homogenize light emitted by its light sources more fully than at least one of the light engine modules which is intentionally designed to noticeably not fully homogenize the light emitted by its light sources. In the preferred embodiment the non homogenizing light engine module also includes light modulator(s) optionally engagable to more fully homogenize the light output from that light engine module.
