Abstract (en)
[origin: WO2017167955A1] The invention relates to a drumstick for a percussion instrument, comprising a substantially elongated stick shaft, on which a connection part is formed at at least one shaft end, on which a stick head (10) produced from a polymer material is arranged on one side at the end in a surrounding manner and is connected to same, wherein, in order to enlarge the inner casing surface of the stick head (10) one or more substantially concentrically arranged depressions (105) are formed on the inner casing surface, such that one or more hollow spaces occur, wherein the acoustic pattern when playing the percussion instrument depends on the containment of air and/or adhesive in the one hollow space or multiple hollow spaces.
