Abstract (en)
[origin: WO2017167784A1] The invention relates to a method for feeding electrical power into an electricity supply network (1) by means of at least one wind park (WP1) respectively connected to the supply network by means of a network connection point (12), the supply network (1) being operated with a network frequency, and each wind park (WP1) comprising a plurality of wind energy facilities (100), said method comprising the following steps: determining whether the electricity supply network (1) is in operation; starting the at least one wind park (WP1) in a black-start mode in order to produce electrical power for feeding into the supply network (1) when the supply network (1) is not in operation; and operating the at least one wind park (WP1) in a black-start operation, in which electrical power is fed into the supply network (1), thereby operating the supply network (1), the network frequency being pre-defined, in the black-start mode and/or in the black-start operation, by the feeding of the electrical power.
