Abstract (en)
[origin: US2019029392A1] A cosmetic case includes a base, a cover, a seal and a closing/opening means, the base and the cover being hinged against each other via a pivot connection, the case being capable of occupying two separate positions, a closed position and an open position. The closing/opening means includes an additional part which is in slide connection or in pivot connection with the cover, and one or more locking means connected to the additional part, respectively to the base, the locking means forming a multipoint locking applying a sufficient pressure on a seal when the case is in the closed position such that the sealing against impurities and fluids between the inner and outer environments of the case, in the closed position, is total under the normal temperature and pressure conditions (NTPC), the seal being presented in the form of a material strand.
