Abstract (en)  
Extendable table comprising a fixed frame (14) provided with first fixed longitudinal cross-pieces (19), and associated with its own legs (16) and with a fixed main top (12), and a mobile frame (15) associated with its own legs (17) and provided with second mobile longitudinal cross-pieces (22) with which a mobile extension top (13) is associated. The second mobile longitudinal cross-pieces (22) are able to slide along the first fixed longitudinal cross-pieces (19), to take the mobile extension top (13) from a retracted position in which it is located under the fixed main top (12), to an extended position in which the mobile extension top (13) is located adjacent and, by means of positioning means (43), coplanar to the fixed main top (12). The extendable table (10) comprises actuator means (25) configured to move the mobile frame (15) in a motorized manner with respect to the fixed frame (14), and to determine the sliding of the second mobile longitudinal cross-pieces (22) along the first fixed longitudinal cross-pieces (19).
