Abstract (en)  
A multistation carousel (1) for changing a tool (A) wherein is placed a die of a press, comprises a supporting structure and a rotating table (3) divided into at least three segments (31) each of which corresponds to a station (21, 23, 25, 27). In particular, the multistation carousel (1) comprises a loading/unloading station (21) of the tool (A) from the press, a standby station (27) and a die changing station (23). Such carousel not only allows a tool and a die of a press to be changed quickly and automatically, but rather, being equipped with different types of stations, it allows the simultaneous execution of several different operations on different tools, all loaded on the carousel itself.
