Abstract (en)

[origin: CN209492533U] The utility model relates to an electrical interface in a rail vehicle. Wherein an electrical line guided in the body of the vehicle terminates at least one first part of the electrical plug connection, wherein at least one first part of the electrical plug connector is arranged in the region of a mechanical interface between the body of the vehicle and the headstock module, at least one first part of the electrical plug connector can be connected to at least one second part of the electrical plug connector, in which at least one second part of the electrical plug connector an electrical line guided in the headstock module terminates. In addition, the utility model relates to a rail vehicle.
