Abstract (en)
An inflatable stand up board, comprising: a top layer having a first perimeter; a bottom layer having a second perimeter; a drop stitch layer disposed between the top layer and the bottom layer; a first sealing sheet coupled in an airtight configuration to the first perimeter and the second perimeter; a second sealing sheet disposed at least at one of a front end or a tail end of the inflatable stand up board. The second sealing sheet is coupled in an airtight configuration to the first and second perimeters, and overlaps at least part of the first sealing sheet. The top layer, the bottom layer and the first sealing sheet define an inflatable chamber of the inflatable stand up board. The side of the inflatable stand up board is not easily broken and a double sealing effect is achieved, preventing air leakage.
