Abstract (en)
[origin: EP3438373A1] The invention discloses a façade cladding for insulating a façade of a building comprising a multilayer panel (1) configured for being rolled along a longitudinal direction. The multilayer panel (1) comprises: an inner insulation layer (11) comprising a sheet of a thermally insulating material; an outer aesthetical layer (12) coupled to the insulation layer (11); and a plurality of connection means (13) configured for connecting the insulation layer (11) and the aesthetical layer (12), where the connection means (13) are configured for separating the insulation layer (11) and the aesthetical layer (12) such that a ventilation layer (17) allowing the passage of air is provided therebetween, and such that the insulation layer (11) can slide longitudinally with respect to the aesthetical layer (12).
