Abstract (en)  
[origin: WO2017173469A2] The invention relates to a furniture drive (13) for retracting a movably supported furniture part (3) in a closed end position relative to a furniture body (2), comprising: - a driver (14) for retracting the movable furniture part (3), wherein the driver (14) is displaceably mounted at least in sections along a linear travel path (31a) and can be detachably coupled to the movable furniture part (3), - a spring device (17) for applying force to the driver (14) in a retraction direction (22), - a damping device (19) for damping a movement of the driver (14) in the retraction direction (22), the damping device (19) comprising a fluid chamber (20) and a tappet (21) which is displaceably mounted relative to the fluid chamber (20), - a holding device (16) arranged between the tappet (21) and the driver (14), the holding device (16) holding the tappet (21) relative to the driver (14), wherein the tappet (21) is movable through an opening (24) of the holding device (16) when a force acting upon the driver (14) in the retraction direction (22) is exceeded, whereby the driver (14) can be decoupled from the tappet (21).
