Abstract (en)

[origin: WO2017174936A1] The invention relates to a device (1) for conveying and retaining a glass sheet (2), comprising conveying and retaining means for retaining a glass sheet in position, in particular in a horizontal position, characterised in that the conveying means comprise at least two parallel conveyor systems (10A, 10B), known as the lateral conveyor systems, spaced apart from one another, extending longitudinally in the conveying direction and intended to be arranged so as to support the lateral sides of the glass sheet, and the retaining means comprise at least one retaining system (11A, 11B) placed above the lateral conveyor systems (10A, 10B) and above the glass sheet and intended to limit the range of movement of the glass sheet.
