Abstract (en)

[origin: WO2017174262A1] The invention relates to a method for printing at least partly transparent containers (10). In a first printing step, a first printed image (DB1) is printed by applying at least one printing ink onto the container (10), and in a second printing step, a second printed image (DB2) is printed by applying at least one printing ink onto the container (10). The printed images (DB1, DB2) are printed in an at least partly overlapping manner, namely such that layers of ink are applied onto the container (10) with a time delay. A first layer of ink is paired with the first printed image (DB1), and a second layer of ink is paired with the second printed image (DB2). A reflective layer (RFLX) is at least partially provided between the first and second printed image (DB1, DB2), said reflective layer being used to at least partially optically separate the printed images (DB1, DB2).
