Abstract (en)

[origin: WO2017176729A1] A transport refrigeration unit (26) includes a compressor (58) constructed and arranged to compress a refrigerant and an electric compressor motor configured to drive the compressor. A generator (54) of the unit is configured to provide electric power to the compressor motor during standard set point conditions, and an energy storage device of the unit is configured to supplement the electric power to the compressor motor during temperature pulldown conditions.
