Abstract (en)

[origin: WO2017174494A1] The installation device for an apparatus for treating, in particular dampening and/or cleaning, a usable fluid, in particular a gas, by means of a working fluid, in particular a liquid, and in particular for cooling steam by means of spray water and/or dripping water, is provided with at least one installation package (10) consisting of a plurality of square, corrugated mat elements (12) which are arranged on and/or next to one another. Each corrugated mat element (12) has half channels (23) formed by depressions (22) and elevations (24) following one another in an alternating manner. At least one pair of adjacently arranged mat elements (12) is arranged with a distance of the depressions of the one mat element (12) in relation to the elevations of the other mat element (12) being maintained.
