Abstract (en)

[origin: WO2017174188A1] The invention relates to a method for the extracorporeal removal of pathogens and/or an excess of components from a cell sample of a human or animal patient suffering from an illness. The method comprises the steps: a) determination of at least one protein cluster (CMP) that is characteristic of the illness of the patient; b) preparation of the cell sample of the patient; and c) extracorporeal removal of components having the at least one determined protein cluster from the cell sample. The invention further relates to a device for carrying out said method.
