Abstract (en)

[origin: WO2017091777A1] The present disclosure provides methods, processes, reagents and kits for novel healthcare delivery, treatment and payment, particularly for achieving better economic outcomes in patients treated with specialty drugs. Methods, processes, and kits provide a number of uses, including, for providing assurance, both efficacy and financial, theragnostic-guidance, for providing therapeutic appropriateness, therapeutic guidance, therapeutic effectiveness, and selection of alternative therapeutic strategies, and providing product differentiation and presumably market enrichment for a specialty drug, for authorizing payment and delivering the drug directly from a pharmaceutical company to a patient or her specialty physician through a novel healthcare delivery platform. Medical records and databases using these strategies are also provided.
