Abstract (en)

[origin: WO2017174526A1] The invention relates to a method for using a mobile telephone for communication between a visitor at a door station having a short-range communications interface and an owner of the door station who is located outside the short range. According to the invention, the visitor uses a mobile telephone, Ipad, a smart watch, or another portable, communication-enabled data-processing device to communicate via the short-range communications interface of the door station, such that in response thereto an item of information is communicated to the visitor by the owner.
