Abstract (en)
[origin: WO2017174394A1] The invention relates to a plug connection for transmitting electrical signals comprising a housing; an insulating member to be arranged inside the housing and having a plurality of internally located conductors which are insulated from one another; wherein the insulating member comprises an insulating member front part and an insulating member rear part; wherein the insulating member front part can be joined mechanically to an insulating member front part of another plug connection, and wherein the conductor on the insulating member rear part can be electrically connected to a cable. The conductors between the insulating member rear part and the insulating member front part in each case form a releasable electrical connection.
