Abstract (en)

[origin: WO2018001769A1] The invention relates to a fastening system having a plurality of adapters, wherein a first adapter (1) has at least a first slotted tab (4) with a first slot (8) and a second slotted tab (5) with a second slot (9), wherein a second adapter (2) has at least a first guide tab (12) with a first guide bolt (17) and a second guide tab (13) with a second guide bolt (18), and a third adapter (3) has at least a first securing bolt (22) and a second securing bolt (23), wherein, in an assembled state of the first and second adapter (1, 2), each guide bolt (17, 18) is arranged in the respectively assigned slot (8, 9), and wherein the securing bolts (22, 23) can be locked through the associated slotted tabs (4, 5). The resulting advantage obtained is that the number of fastening means required can be reduced and the relevant apparatus remains in its position even when the fastening means are released.
