Abstract (en)
According to an example aspect of the present invention, there is provided a packaging (1) comprising a first main panel (2), a first side panel (3), a second main panel (4), and a second side panel (5), defining a box body and being separated from one another by folding lines (6) formed on a flexible material sheet, at least one closure cover for said box, wherein the closure cover includes a tongue (7) projecting from a closure panel (8) in turn projecting from the first main panel (2), the closure panel (8) being separated from the tongue (7) and from the first main panel (2) by folding lines (6), the tongue (7) being configured to be introduced into the box under the second main panel (4), and wherein through the tongue (7) at least one elongated window (9) is provided, a lug (10) projecting from the closure panel (8) and being arranged coplanar with it, a first dust panel (11a) projecting from the first side panel (3) and a second dust panel (11b) projecting from the second side panel (5), wherein each dust panel (11a, 11b) is provided for turning about a folding line (6) and is configured to be arranged under the closure panel (8) of the cover, a first tooth (12a) being arranged coplanar with the first dust panel (11a) and a second tooth being (12b) arranged coplanar with the second dust panel (11b), and wherein the teeth (12a, 12b) are configured to extend through the window (9) and to project from the window (9) as said cover is closed, and wherein the second main panel (4), which is arranged opposite to the first main panel (2), comprises a first preset breakage line (13) for facilitating a separation of a portion of the second main panel (4), and each dust panel (11a, 11b) includes a second preset breakage line (14) along a portion of the respective dust panel (11a, 11b).
