Abstract (en)

[origin: EP3441692A1] In order to provide a ceiling-embedded air conditioner with which drafts can be prevented while controlling the airflow direction, this air conditioner is equipped with: a main body part in which discharge openings are formed; louvers (16) positioned near the discharge openings; and flap mechanisms (18) that guide, in a prescribed direction, air the airflow direction of which has been adjusted by the louvers (16). A guiding part of the flap mechanisms (18) can move to a first position in which the discharge opening is closed, and a second position, in which the air the airflow direction of which has been adjusted by the louver (16) is received.
