Abstract (en)
[origin: CA3022126A1] The invention relates to a holder (10) for at least two lavatory-paper rolls (12, 14) which are positioned one above the other and consist of a paper web (56) wound up on a sleeve (52, 54) or a shaft, the holder comprising a first and a second wall (28, 30) which are arranged in parallel at a distance to one other, wherein each of the walls (28, 30) has a guide (40, 42) for receiving one end of the shaft or of a shaft journal that can be received in an opening in the sleeve. The guide (40, 42) has a feed portion (40b) running substantially vertically, for feeding a lavatory-paper roll (12, 14), said feed portion merging into an unrolling portion (40c) running at an inclination with respect to the vertical towards at least one first tear-off element (60, 62) or a stop (72), wherein the gravitational force of the lower lavatory-paper roll (12, 14) located in the unrolling portion (40c) causes the circumference of said lavatory-paper roll to lie against the stop (72) and the paper web (56) can be unrolled from the lavatory-paper roll (14) through a removal opening (58) and can be torn off against the at least one tear-off element (60, 62). In order for the holder to have a simple construction and be low-maintenance and reliable in operation, said holder (10) has a locking element (110) which prevents the lower lavatory-paper roll (14) that is in use from being pushed back into the feed portion (40c) of the guide (40, 42).
