Abstract (en)
[origin: WO2017178730A1] The invention relates to a suit for aquatic activities, having a central part (1) intended to cover the torso of the wearer as a close fit, the said central part being formed between a ventral panel (2) and a dorsal panel (3) which are connected to one another laterally creating a top opening (4), two lateral openings (5) and two lower openings (6), the said ventral panel having a main slit (10) extending between the upper opening (4) and a lower end (10b), the said main slit to being equipped with a reversible opening device to allow the said suit to be put on and taken off by transversely opening the said ventral panel, the said suit comprising an additional slit (13) which extends in the dorsal panel (3) between two ends, respectively an upper end (13a) and a lower end (13b), the said additional slit being equipped with a reversible opening device so as to allow the said dorsal panel to be released transversely to make the said suit easier to take off.
