Abstract (en)
[origin: WO2017178148A1] The present invention relates to a device on a carding machine, which preferably extends over the entire working width of the carding machine, comprising at least one functional side or functional surface which can come into direct or indirect contact with fibrous material, wherein the device has at least one cavity which extends at least partially along the length thereof. The invention is characterized in that a deforming device (21) is arranged in the cavity (20d, 20e), it being possible for a force for distorting the device to be generated within the cavity (20d, 20e) by way of said deforming device (21). The invention also relates to a deforming device and a measuring device.
