Abstract (en)
[origin: WO2017178961A1] The invention relates to a ring spinning machine and to a method for operating the ring spinning machine (1). The machine comprises at least one oscillating device (9) for laying rovings, wherein the oscillating device (9) is connected to roving guide rails (14), wherein the roving guide rails (14) extend from the oscillating device (9) in both directions in the longitudinal direction (x) of the ring spinning machine (1). The machine has a plurality of drafting arrangements (5) for twisting a roving (6), wherein the oscillating device (9) is driven by the input lower roller (101) of the drafting arrangement drive. Advantageously, the ring spinning machine (1) according to the invention is permitted greater flexibility in terms of construction, as a result of the drive according to the invention of the oscillating device (9), in particular in long or very long machines.
