Abstract (en)

[origin: WO2017178968A1] A system for securing a railway apparatus (12), comprising a support platform (22) suitable for being positioned in a loading position, and at least one securing mechanism for securing the railway apparatus (12) to the support platform (22), capable of switching from an unlocked state to a locked state. The securing mechanism comprises at least one guide rail (36.1, 36.2), at least one trolley (34.1, 34.2) guided by the guide rail (36.1, 36.2) along a path which, when the support platform (22) is in the loading position, is parallel to a reference plane, means for immobilising the trolley (34.1, 34.2) relative to the guide rail (36.1, 36.2), at least one attachment member (32.1, 32.2) for attaching the railway apparatus (12) secured to the trolley (34.1, 34.2); and locking members (58) for locking the guide rail (36.1, 36.2) relative to the support platform (22), which switch from an unlocked position to a locked position when the securing mechanism switches from the unlocked state to the locked state in the loading position of the platform, by urging the guide rail (36.1, 36.2) downwards relative to the support platform (22).
