Abstract (en)

[origin: WO2017178331A1] The identification system (30) comprises an identification console (40) and an identification element (10) comprising at least a signature (100). The signature (100) comprises a code that is producible by means of a random number generator and optionally at least a known code which is formed by frozen mechanical tensions (20), which comprises at least one coding element and which can be read by means of suitable readout methods by means of the identification console (40). As a result of the code that is producible by means of the random number generator having at least one random level, an identification element (10) is developed which cannot be copied or which can only be copied with appropriate knowledge and significant technical outlay.
