Abstract (en)

A pouch (100) for tobacco products comprises: a pocket (110) for housing the tobacco products (130), the pocket (110) having an opening for accessing the tobacco products (130); and a flap (120) extending from the pocket (110) and movable relative to the pocket (110) between a first position in which the flap (120) is folded over the pocket (110) to cover the opening and a second position in which the opening is uncovered. The pouch (100) further comprises a resealable closure means for sealing the opening of the pocket (110), the closure means provided proximate the opening and comprising a first layer of a self-healing material (160) on a first inner surface of the pocket (110) and a second layer of the self-healing material (162) on a second inner surface of the pocket, opposite the first inner surface, wherein upon contact between the first layer (160) and the second layer (162) of the self-healing material, the self-healing material self-heals to form a seal between the first inner surface and the second inner surface of the pocket (110).
