Abstract (en)
A container assembly 10 including a primary container 12 and a secondary container 14 removably attached to the primary container. The primary container includes a top 16, a bottom 18 and a side 20. The side includes a recess 26 in which the secondary container is located when attached to the primary container. The recess is defined by two side walls 28 extending laterally from a rear wall of the recess toward an outer surface of the side wall. The secondary container includes a top 30, a bottom 32 and a side 34. The secondary container is attached to the primary container through a set of securing attachments 40, each including a protrusion 42 and mating indentation 44. At least one of the walls of the primary container and the side of the secondary container includes the set of protrusions, and the other of the walls of the primary container and the side of the secondary container includes the set of mating indentations.
