Abstract (en)
A unique share cart that enables customers to dynamically aggregate the goods or services in a single order enhancing the e-commerce value proposition. The guest users involved in the transaction are identified in advance by the initial purchaser and have a predetermined window opportunity to sign in, access the shared cart and add products. Once a group of users has been created items can be added to the share cart simultaneously with information staying within the web server storage device. Moreover, the final order invoice, sent to the vendor and each user, takes into account the subtotals, both in terms of products and delivery costs. After the deadline, the access to guest users will be denied and only the initial purchaser will be able to finalise the purchase.
