Abstract (en)

[origin: WO2017184069A1] The present invention relates to a skate guard (100) for protecting the blade of a skate. The skate guard (100) comprises: a groove (102) extending along a longitudinal direction (104) of the skate guard (100), the groove (102) being suitable for receiving the blade, a base (200), and a cross-sectional part (106), wherein the cross-sectional part (106) has a stable state in which: the base (200) is arranged to be in contact with a horizontal surface (107) and wherein the cross-sectional part (106) has an unstable state in which a point of support (402), in contact with the horizontal surface (107), and a center of gravity (108, 404) of the skate guard (100) is positioned on a same side as the base relative to a defining plane (408), wherein the skate guard (100) is arranged to return to the stable state in event of the skate guard (100) being in the unstable state.
