Abstract (en)

[origin: WO2017184785A1] A virtual reality (VR) system includes a VR display and a VR movement apparatus that includes hand interfaces and foot interfaces that can support the hands and feet of a system user. The VR movement apparatus allow the user's limbs to move in 3-dimensional space that include vertical, lateral, and fore-aft direction movements. A computer running VR software coordinate and synchronizes the VR movement apparatus and the VR display to provide system users with simulated activities in a VR environment.
