Abstract (en)
[origin: WO2017182628A1] The invention relates to a layer material (10) with fire-proofing treatment, which is in particular designed as a plate-shaped material, preferably for interior works and/or dry construction applications. Said layer material has a plurality of layers which are connected to one another, wherein at least one of the layers is designed as a cellulose-containing material layer, in particular a wood layer (11). The layers are permanently connected to one another by means of an adhesive layer (12). The layer material (10) is characterized in that the adhesive layer (12) and the at least one cellulose-containing material layer are designed in a fire-retardant manner. In addition, the invention relates to a finishing panel, to a method for producing a layer material (10) and to the use of a sealing material.
