Abstract (en)
[origin: US2017297802A1] A consumer product package includes a package body that has a front wall, a back wall opposite the front wall, a first cavity having a display surface such that the display surface is disposed between the front and back walls to contain a first consumer product, and a closure slot disposed between the front wall and the display surface; and a lid pivotally connected to the package body opposite the front wall. The lid includes an opening tab positioned along an edge of the lid and an opening flap positioned along the edge of the lid. The lid is pivotable between at least an open position and a closed position, wherein when the lid is in the closed position, the opening flap is received within the closure slot, and when disposed within the closure slot, the package has an Average Lift Force from about 0.01 N to about 4.0 N.
