Abstract (en)

[origin: WO2017182027A1] The invention relates to a motor vehicle door lock comprising a ratchet-type mechanism (1, 2) substantially consisting of a pawl (1) and a rotary latch (2). The motor vehicle door lock is also provided with a release lever (5) for the ratchet-type mechanism (1, 2) and at least one actuation lever (8) and a blocking element (12). The blocking element (12) brings about a mechanical connection during normal operation and a mechanical separation, when operating in the event of an accident, between the actuation lever (8) and the release lever (5). According to the invention, the blocking element (12) is designed as a coupling lever (12) mounted on the actuation lever (8), which pivots independently from the actuation lever (8) applied with spring force when operating in the event of an accident.
