Abstract (en)  
[origin: WO2017182569A1] The invention relates to an adapter (100) for a radiator and comprises: - a body (104) having an opening (152), - a slider (102) having an opening (150) and a coaxial nut having a longitudinal axis (10), and mounted to move in translation on the body (104) parallel to the longitudinal axis (10) between a near position in which the slider (102) approaches the valve and a remote position in which the slider (102) moves away from the valve, - two parallel bars arranged on either side of the longitudinal axis (10), - a return element which constrains the slider (102) in the remote position, and - a screw (108) with a central bore and which screws into the nut, said body (104) having, for the end of each bar, a guiding means ensuring a movement of said bar perpendicular to the longitudinal axis (10), said slider (102) having, for each bar, two opposing parallel slots, each in a clamping plane parallel to the longitudinal axis (10), the two slots which are arranged in the same clamping plane are disposed as a V in which the tip is orientated towards the openings (150, 152), and the spaced ends are orientated on the opposite side.
