Abstract (en)

The invention relates to a garment care device (100) comprising a sensor (101) connected to a control unit (104) for generating an output signal characterizing a movement of the garment care device, and a display (102) for displaying at least one light indicator (103). The control unit (104) is adapted to identify some movement characteristics in the output signal, and control the switching of the at least one light indicator (103), based on said movement characteristics.
