Abstract (en)
[origin: EP3447208A1] The invention relates to a structure, comprising: - a plurality of spacers, each spacer comprising a first longitudinal side and a second, opposite longitudinal side, wherein loops are provided along the first and second longitudinal sides, wherein first loops of said loops define an opening therein with a size that is larger than an outer dimension of second loops of said loops, such that the second loops are allowed to pass through said openings in the first loops, wherein the spacers are coupled to each other in such a manner that the second loops of a said spacer extend through the first loops of a next spacer, and wherein openings in the second loops of coupled spacers are registered in line with respect to each other, - a plurality of locking elements, each locking element extending through the openings of the second loops that are registered in line with respect to each other, thereby locking the second loops with respect to the first loops.
