Abstract (en)

[origin: WO2017186874A1] A two-pocket pouch is provided comprising a first pocket and a second pocket. The first pocket and the second pocket are symmetric about an optionally perforated mirror folding line and are optionally connected. The pouch is suitable for storing consumer articles, in particular loose tobacco. Furthermore, a method for making same is disclosed. The first and the second pockets in their closed position comprise a pocket front wall and a pocket rear wall, wherein an access opening is provided between the upper edges of the pocket front wall and the pocket rear wall. The pocket further comprises a cover flap. The cover flap extends from the pocket rear wall. An extension flap extends from the cover flap. In the closed position of the pouch, the cover flap is folded over the front wall in order to overlie the access opening. In the closed position of the pouch, the extension flap is folded between the pouch front wall and the cover flap. In the closed position of the pouch, the inner surface of the extension flap adheres to the inner surface of the cover flap.
